Sami Halawa Ribas

has successfully completed the online Specialization

Building and Deploying AI Agents with LLMs and LangChain

Learners in this Specialization developed practical skills in designing, building, and deploying AI agent systems for real-world applications. They architected single-agent systems with modular reasoning, persistent memory using Mem0, and structured validation using Pydantic-AI within LangGraph workflows. Learners designed multi-agent collaboration systems using CrewAI and Agno — implementing role-based coordination, shared memory, and communication patterns across planner, executor, and reviewer agents. The program culminated in production deployment — integrating LLMs into orchestrated multi-agent workflows, deploying via FastAPI, connecting with external enterprise APIs, and implementing monitoring and evaluation pipelines for reliability and performance.

This certificate attests to the learner's completion of an online program delivered via Coursera. It does not constitute formal enrollment at any university or entity and does not itself grant academic credit, grades, or a degree. Institutions or organizations may, at their discretion, recognize this learning toward their own programs or credentials.
