Sami Halawa Ribas

has successfully completed the online Specialization

Managing AI Systems: Development, Deployment, and Governance

Learners in this Specialization developed the practical skills required to manage modern AI systems across the full lifecycle—from prototype to production to policy. They applied structured frameworks for architecting AI solutions, distinguishing between Predictive ML and Generative AI use cases, and building functional prototypes using RAG pipelines, vector databases, and orchestration tools. Learners operationalized AI workflows using MLOps and LLMOps practices, including CI/CD pipelines, prompt versioning, inference optimization, and observability strategies. The program culminated in AI governance, risk management, and audit—where learners implemented Red Teaming, guardrails, explainability techniques, and regulatory compliance strategies aligned with the EU AI Act and NIST AI Risk

This Specialization attests to the learners' completion of an online program delivered via Coursera. It does not constitute formal enrollment at any university or entity and does not itself grant academic credit, grades, or a degree. Institutions or organizations may, at their discretion, recognize this learning toward their own programs or credentials.
